## Table of Contents

=====

- 1 Making a "GNU release"
- 2 Implementation

### 1 Making a "GNU release"

~~~~~

- GNU Source Release Collection (GSRC / GNU SRC)  
<http://www.gnu.org/software/gsrc/>
- goal: make it easy for users to install latest GNU packages from source into their home directories i.e. deal with dependencies

### 2 Implementation

~~~~~

- Ports system (like BSD)
- resurrected GAR (Nick Moffit) + GARstow enhancements (Adam Sampson)
- GNUmake
- similar to GARNOME for GNOME
- differences
  - uses bzip (not cvs/svn)
  - all packages gpg-checked
  - stow-style install (but using cp --link)
- bzip update ; make install
- # build and install all latest packages
- ~230 packages
